ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information. From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurate and validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Deals	4
Key Indications	Alzheimers disease,Osteoporosis,Prostate hyperplasia,Parkinsons disease,Poliovirus infection,Psychiatric disorder,Urinary dysfunction,Urinary tract disease
Key Target-based Actions	Acetylcholinesterase inhibitor,Parathyroid hormone receptor agonist,Alpha adrenoceptor antagonist,Dopamine D2 receptor agonist,Dopamine D3 receptor agonist,NMDA receptor antagonist,Parathyroid hormone ligand,Alpha 1A adrenoceptor antagonist
Key Technologies	Transdermal formulation,Patch formulation,Small molecule therapeutic,Biological therapeutic,Drug combination,Peptide,Controlled release formulation,Absorption enhancer transdermal,Formulation preservation,Sustained release formulation

COMPANY PROFILE

SUMMARY

Corium International Inc specializes in the R&D and manufacture of transdermal drug delivery platforms and products.

FINANCIAL

In December 2014, the company revised and closed an expanded term loan facility with CRG (previously known as Capital Royalty L.P.). Under the revised term, the company would get additional \$10 million from CRG cumulating the total loan amount to \$45 million and the maturity date of the all the debt to CRG was changed from June 2017 to June 2019.

In March 2014, Corium filed a registration statement Form S-1 with the US SEC for a proposed initial public offering of common stock. At that time, the company planned to list on the NASDAQ Global Market under the ticker symbol 'CORI'. In April 2014, the company priced its initial public offering of 6,500,000 shares of common stock priced at \$8.00 each and the underwriters were granted a 30-day option to purchase up to 975,000 additional shares of common stock. At that time, the shares began trading on the NASDAQ Stock Market. By May 2014, the initial public offering was completed and the company raised \$48.5 million net proceeds through the offering.

PRODUCT PORTFOLIO DRUG PIPELINE DETAIL

PLEASE NOTE: Highest status refers to highest development of that drug for one of the active companies

teriparatide (transdermal, MicroCor, osteoporosis), Corium International

teriparatide (transdermal, MicroCor, osteoporosis), Corium International SNAPSHOT

Drug Name	teriparatide (transdermal, MicroCor, osteoporosis), Corium International
Key Synonyms	teriparatide;MicroCor PTH(1-34)
Originator Company	Corium International Inc
Active Companies	Corium International Inc
Inactive Companies	
Highest Status	Phase 1 Clinical
Active Indications	Osteoporosis
Target-based Actions	Parathyroid hormone ligand;Parathyroid hormone receptor agonist
Other Actions	Osteoblast stimulator;Bone synthesis stimulator
Technologies	Patch formulation;Biological therapeutic;Transdermal formulation;Peptide
Last Change Date	17-Feb-2015

teriparatide (transdermal, MicroCor, osteoporosis), Corium International DEVELOPMENT PROFILE

SUMMARY

Corium International is developing transdermal patch formulation of teriparatide (human PTH(1-34); MicroCor PTH(1-34)) using its MicroCor technology, for the potential treatment of osteoporosis. In June 2011, the drug was listed as being in phase II development. However, in November 2013, the drug was listed as being in phase I development. In May 2014, phase II trials for osteoporosis were planned for 2015. By September 2014, the company had been planning to initiate a phase IIa study which was expected to complete in the first half of 2015 followed by a phase IIb study in osteoporosis patients and a phase III trial. At that time, the company was seeking to outlicense the drug for commercialization.

Last Change Date	17-Feb-2015

donepezil + memantine (transdermal patch, Alzheimers disease), Corium DEVELOPMENT PROFILE

SUMMARY

Corium International is investigating a combination of donepezil, an acetylcholinesterase inhibitor, and memantine, an NMDA receptor antagonist, as a transdermal patch formulation, for the potential treatment of Alzheimer's disease. In September 2014, the combination was in preclinical development and at that time, the company was expecting to develop the combination under a 505(b)(2) regulatory pathway.

tamsulosin (transdermal/Corplex, benign prostatic hyperplasia), Corium DEVELOPMENT PROFILE

SUMMARY

Corium International was developing a controlled release transdermal patch formulation of tamsulosin, an FDA-approved urological product as alpha adrenoceptor antagonistic activity, using Corplex transdermal technology, for the potential treatment of benign prostatic hyperplasia,. In November 2013, the drug was listed as being in phase II development, and at that time, the company was seeking to outlicense the drug. However, by September 2014, Corium decided to reallocate capital from the program to its Alzheimer's and Parkinson's disease programs, with any further investment in tamsulosin to be dependent on potential partnering and external funding.
