FibroGen, Inc.

FibroGen Continues to Make Clinical Progress Toward Key Catalysts in 2016

After the markets closed on Thursday, November 12, FibroGen reported its third-quarter earnings. The company reported a loss per share of \$0.74, compared with our estimate of a loss per share of \$0.53 and the Street's estimate of a loss per share of \$0.59. The increased loss per share was primarily driven by a lower-than-estimated noncontingent license payment from partner AstraZeneca (AZN \$30.85). A variance analysis between our estimates and the company's actual results for the quarter are summarized in exhibit 1.

- Roxadustat development remains on track, with regulatory filings planned for 2016 in China and 2018 in the United States, pending positive trial results. Roxadustat is involved in seven continuing global Phase III clinical trials, partnered with AstraZeneca and Astellas. In the three trials being run by FibroGen, ANDES (in nondialysis patients), HIMALAYAS (in incident dialysis patients), and SIERRAS (in stable dialysis patients), more than 80% of the target enrollment has been reached, and we anticipate target enrollment will be met between March and April of 2016. In October, the data safety monitoring board completed its scheduled review of the Phase III trials and recommended that the studies proceed without protocol changes. Management also disclosed the potential to test roxadustat in two additional anemia indications in China, myelodysplastic syndrome and chemotherapy-induced anemia, due to the lack of blood transfusion infrastructure in the country. Roxadustat has the potential to capture significant market share of patients with anemia, which we estimate to be roughly \$8.6 billion globally. In addition, the compound may be able to expand the current market due to its superior safety profile compared with the current standard of care (such as Epogen).
- Management disclosed early signs of clinical activity with FG-3019, FibroGen's wholly owned connective tissue growth factor (CTGF) inhibitor, in patients with unresectable pancreatic cancer. In a continuing Phase II trial comparing gemcitabine plus nab-paclitaxel with or without FG-3019 in patients with unresectable pancreatic cancer, three of the four patients given FG-3019 were reevaluated and determined to be eligible for resection, with the fourth patient discontinuing treatment due to an unrelated adverse event. All three patients who were randomized to receive gemcitabine plus nab-paclitaxel alone did not become eligible for surgical resection after treatment. Although this is a very small sample size, we believe it shows additional signs of clinical activity for FG-3019 across multiple diseases with fibrotic components. In addition to pancreatic cancer, a continuing Phase II trial in patients with idiopathic pulmonary fibrosis and the initiation of a Phase II trial in nonambulatory Duchenne muscular dystrophy patients has the potential to provide near-term upside on FibroGen's stock performance. FibroGen's time-and-events calendar is presented in exhibit 3.

Sources: FactSet, William Blair & Company estimates

FibroGen is a San Francisco-based biopharmaceutical company focused on the discovery, development, and commercialization of novel therapeutics to treat serious unmet medical needs. The lead product candidate, roxadustat, is in Phase III clinical study with pivotal data expected in the second half of 2016.

Please refer to important disclosures on pages 5-6. Analyst certification is on page 5.

William Blair or an affiliate does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as a single factor in making an investment decision.

• FibroGen ended the quarter with \$365.6 million in cash, and we believe current cash levels will sustain the company for at least two years, based on the current burn rate. FibroGen is involved in an economically rich, global collaborative framework with Astellas and AstraZeneca, which decreases the capital and development risk while helping the company build a healthy balance sheet. On the call with investors, management guided that FibroGen's cash balance at the end of 2015 would be in the range of \$330 million to \$340 million, and its preliminary cash guidance at the end of 2016 was estimated to be in the range of \$295 million to \$300 million. In addition, FibroGen's funding obligation outside of China for lead compound roxadustat will likely be fulfilled before December (\$11.8 million out of \$116.5 million remains as of the end of the third quarter). Accordingly, we have adjusted our financial model to come more in line with operating trends and management guidance (exhibit 2). Given its strong financial position and multiple clinical assets' potential, we maintain our Outperform rating on FibroGen shares.

Valuation

FibroGen is currently trading at \$25.26, with a market cap of \$1.53 billion. We believe that FibroGen's three advanced, wholly owned clinical compounds offer the potential for significant shareholder value creation due to the robust efficacy and safety observed to date and the significant commercial opportunity in markets with a high unmet medical need.

Risks

We believe the most important risks for FibroGen are clinical, regulatory, and financial. As with all biotechnology companies engaged in clinical development, the risk of clinical trial failure is significant, and FibroGen is engaging in late-stage trials with its two most-advanced assets. We believe failures with either of these compounds will weigh on the company's shares. In addition, FibroGen has no prior experience bringing a compound to market, so we acknowledge that there is regulatory risk as the company navigates through the process. Lastly, FibroGen continues to spend more money than it generates, so there is the risk that the company will need to access the capital markets to fund its continuing operations.

Our financial model is presented in exhibit 4 on the following page.

Exhibit 4 FibroGen, Inc.

Current Rating Distribution (as of 10/31/15)

041.101101141111 B 2 10 01 10 01 01 01				
Coverage Universe	Percent	Inv. Banking Relationships*	Percent	
Outperform (Buy)	67	Outperform (Buy)	15	
Market Perform (Hold)	31	Market Perform (Hold)	3	
Underperform (Sell)	2	Underperform (Sell)	0	

^{*}Percentage of companies in each rating category that are investment banking clients, defined as companies for which William Blair has received compensation for investment banking services within the past 12 months.

The compensation of the research analyst is based on a variety of factors, including performance of his or her stock recommendations; contributions to all of the firm's departments, including asset management, corporate finance, institutional sales, and retail brokerage; firm profitability; and competitive factors.

OTHER IMPORTANT DISCLOSURES

Stock ratings, price targets, and valuation methodologies: William Blair & Company, L.L.C. uses a three-point system to rate stocks. Individual ratings and price targets (where used) reflect the expected performance of the stock relative to the broader market (generally the S&P 500, unless otherwise indicated) over the next 12 months. The assessment of expected performance is a function of near-, intermediate-, and long-term company fundamentals, industry outlook, confidence in earnings estimates, valuation (and our valuation methodology), and other factors. Outperform (0) – stock expected to outperform the broader market over the next 12 months; Market Perform (M) – stock expected to perform approximately in line with the broader market over the next 12 months; Underperform (U) – stock expected to underperform the broader market over the next 12 months; not rated (NR) – the stock is not currently rated. The valuation methodologies used to determine price targets (where used) include (but are not limited to) price-to-earnings multiple (P/E), relative P/E (compared with the relevant market), P/E-to-growth-rate (PEG) ratio, market capitalization/revenue multiple, enterprise value/EBITDA ratio, discounted cash flow, and others.

Company Profile: The William Blair research philosophy is focused on quality growth companies. Growth companies by their nature tend to be more volatile than the overall stock market. Company profile is a fundamental assessment, over a longer-term horizon, of the business risk of the company relative to the broader William Blair universe. Factors assessed include: 1) durability and strength of franchise (management strength and track record, market leadership, distinctive capabilities); 2) financial profile (earnings growth rate/consistency, cash flow generation, return on investment, balance sheet, accounting); 3) other factors such as sector or industry conditions, economic environment, confidence in long-term growth prospects, etc. Established Growth (E) – Fundamental risk is lower relative to the broader William Blair universe; Core Growth (C) – Fundamental risk is approximately in line with the broader William Blair universe; Aggressive Growth (A) – Fundamental risk is higher relative to the broader William Blair universe.

The ratings, price targets (where used), valuation methodologies, and company profile assessments reflect the opinion of the individual analyst and are subject to change at any time.

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies—to our clients and our trading desks—that are contrary to opinions expressed in this research. Certain outstanding reports may contain discussions or investment opinions relating to securities, financial instruments and/or issuers that are no longer current. Always refer to the most recent report on a company or issuer before making an investment decision. Our asset management and trading desks may make investment decisions that are inconsistent with recommendations or views expressed in this report. We will from time to time have long or short positions in, act as principal in, and buy or sell the securities referred to in this report. Our research is disseminated primarily electronically, and in some instances in printed form. Electronic research is simultaneously available to all clients. This research is for our clients only.
