Pharmaceutical Svcs. **R&D Higher, Biotechs Richer, CROs Happier; Upgrading Q to Buy**

Key Takeaway

We remain positively biased toward CROs ahead of 1Q earnings, which are set to begin Monday, April 27. Robust biotech funding continues to push global R&D spending higher, with growth rates for '15-'16 looking to be ~250 bps better than our previous forecast. Recent checks also indicate strategic deal activity continues, increasing outsourcing penetration and pulling share to top players. PRAH, Q (upgrade to Buy) are our favorites for 2015.

Upgrading Quintiles to Buy, \$79 PT. Our thesis is based on: (1) an improving macro outlook for global R&D spending; (2) declining risk/less acute exposure to big pharma M&A; (3) continued fundamental margin expansion, principally in IHS; (4) a larger-than-expected FX benefit to PDEV margin; (5) industry leading 2H14 bookings that lead to accelerating 2H15 revenue growth; and (6) share underperformance of 780 bps YTD relative to peer average.

Improving Outlook for '15 Global R&D Spending. Our bottoms-up CRO market model forecasts 2015 global R&D spending growth of 4.5-5.0%, on a local-currency basis. This compares to the 2.2% growth forecasted in last year's update. We believe the improving outlook is primarily attributable to continued robust biotech funding (which we cover in detail inside), and improving macroeconomic conditions in both Europe and the Americas.

Stronger U.S. Dollar Benefits Margins. Since 4Q14 earnings were reported in mid/late-February, the USD has strengthened further vs. both EUR and GBP. The weaker European currencies mean revenue headwinds across the group have stiffened, introducing the risk of downward adjustments to revenue guidance. On the bright side though, many of the latestage CROs with revenue/cost mismatches, experience an offsetting (or better) EBIT benefit. PRAH should see the biggest lift, followed by ICLR, PRXL and Q.

Pfizer Confirms Third Alliance Partner. An industry website confirmed on Wednesday the addition of a third vendor to Pfizer's Alliance Partnership. We wrote about this in January (http://bit.ly/1lie5vU) and provide further explanation in this report. We continue to expect ICLR's PFE revenue to be flat or slightly down in 2015. Importantly, ICLR's #6-25 clients grew >30% in 4Q.

Raising PTs on Improving Global R&D Outlook. On the higher R&D outlook, we are adjusting price targets on two more players, in addition to Q. For PRXL, the better industry trends may not be enough to clear the high 4Q revenue hurdle. Further, its lower quality growth (tax rate) warrants a discount. Our \$62 is 8% below the stock. CRL's prospects are augmented by biotech funding and, we believe, an accelerating recovery in early development. FX could be an EPS headwind. PT to \$90.

Portfolio Manager Snapshot:

Analysis Points to Higher R&D Spending, Bigger Pie for CROs: Our compilation and analysis of R&D spending for 2014 and forecasts for 2015 and 2016 show higher growth forecasts by 100-150 bps (or about 50% higher than previously expected).

Biotech Funding Growth Continues to Areas that Matter to CROs. Venture (+30%), IPOs (+46%), partnering (+23%), and – to a lesser extent – follow-ons support R&D activity from these young therapeutics companies. All these buckets increased in 2014. Activity in 2015 is also plenty solid.

FX will Hurt Revenue, but Help Margin for Most CROs. Most companies captured the already significant strengthening of the USD when they gave guidance on 4Q earnings call. Yet, the USD has strengthened more against most currencies. While lower quality and less fundamental to the underlying businesses, we think the positive impact to EBIT and EPS could be quite large for some. We'd highlight PRAH as gaining the largest benefit. We also think Q is underplaying the FX benefit in commentary YTD. ICLR and PRXL should get a little lift as well.

Upgrading Q to Buy from Hold; PT to \$79 from \$65. Why Now?

We would offer five reasons:

- Q is coming off a year of solid top-line growth, but even stronger bookings growth. Yes, management has cautioned that the year will get off to a somewhat slow start (we'll revisit this in a minute) because of the gating of cancellations and new business in PDEV, but growth should be well-supported by backlog.
- FX is not going to meaningfully reverse. We are in a strong dollar environment. With the US Federal Reserve considering rate lift-off, a relatively stronger US economy, and (perhaps most importantly) the ECB initiating quantitative easing, the dollar strength against the EURO (and Yen) is likely to continue for some time. Management has downplayed the FX benefit to margin in public commentary year-to-date, but it has filled enough sandbags to protect the Outer Banks from a Category 5 storm surge.
- Fundamental margin expansion can continue, principally in the Integrated Health Services business. That segments growth is driving operating leverage on overhead costs. Management is driving productivity improvements. The shift is mix toward "real-world, late-phase" research and mega-registry studies is also favorable to margin.
- Six analysts have cut numbers in the last three weeks, reducing mean expectations by about a penny and, more importantly, depressed sentiment ahead of 1Q15 earnings results on April 29.
- Finally, Q has underperformed each member of the comp group and underperformed the average by 37%. We think 1Q will actually be better than the now diminished expectations, and we expect the stock to appreciate on the results.

Initial Signs Point to Healthy '15 for CROs

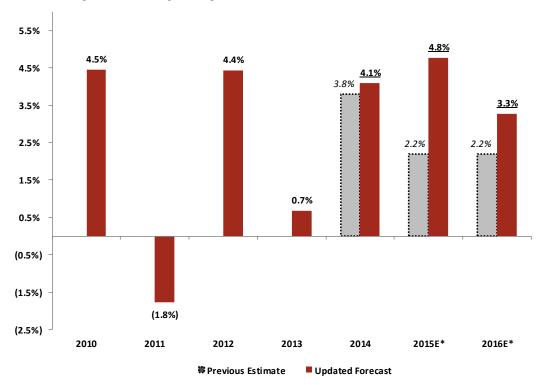

Our "three levers" framework is one we have used (quite successfully, we might add...) for the past several years to assess the health of the macro environment for both early-and late-stage CROs. In this year's first installment, we present initial findings from our bottoms-up CRO market model. More specifically, we update our forecast for global R&D spending growth, Lever I. In subsequent editions, we will include findings from our annual R&D Decision-Maker survey and provide updates for Levers II (outsourcing penetration) and III (market-share consolidation). Look for those in mid-May.

Improving Outlook for '15 R&D Spending, On a Constant-Dollar Basis

Based on findings from our proprietary CRO market model, we believe the '15 outlook for CROs' end market is improving. Our model projects global biopharma R&D spending will grow 4.5-5.0% in 2015 on a constant-Dollar basis. The previous version of our model (published May '14) projected 2.2% growth in R&D spending for this year. See Chart 1. Since the previous edition was published well before the USD began to make its move higher, we believe the estimates established at that time likely approximate growth expectations on a constant-currency basis. Said differently, global biopharma R&D spending growth in the 4.5-5.0% range for '15 is a 230-280 bps better than our previous expectations.

We derive our forecasts by compiling management guidance and sell-side consensus estimates for over 300 companies, including some large private pharmaceutical companies with meaningful budgets. We believe our data captures or represents at least 90% of total global spending.

Growth in Budgets of SMid Biopharmas Will Outpace that of Larger Sponsors

By segment, we believe growth in the R&D spending of small- to mid-sized biopharmas will run significantly faster than the top-end of our forecasted range (i.e. faster than 5.0%), while growth in spending by large biopharma will approximate the low-end. We believe much of the growth expected to come out of the SMid channel is directly attributable to the level of funding we have seen flow into those companies over the past two years. We discuss this in more detail below.

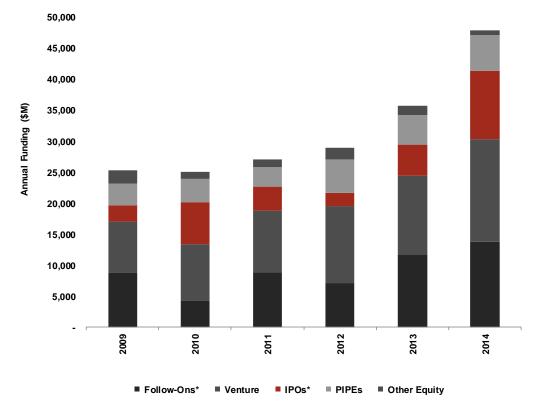

Biotech Funding Update

We believe one of the primary contributors to the growth acceleration is the continuation of the rapid biotech funding. Prior to publishing last year's estimates, there had been some disruption in the biotech market relating to protests over Gilead's pricing of Sovaldi. This likely caused some conservatism in 2015 & 2016 R&D spending forecasts that were developed at that time. Since then, funding activity has snapped back and R&D spending growth for '15 appears to be more robust than we had previously thought.

Inversions Drove Record M&A in 2014

M&A activity nearly tripled in 2014, driven primarily by either outright inversions, or the purchase of assets by previously inverted companies—see Chart 4. The largest deal of the year was an example of the latter—Actavis \$66B purchase of Allergan. Actavis became an Ireland-based company following its 2013 purchase of Warner-Chilcott. The U.S. Treasury department has introduced new rules seeking to limit these types of transactions, meaning 2014 M&A activity levels will be tough to duplicate going forward.

IPO Markets Remain Hot

A total of 133 IPOs were completed in 2014, which compares to 68 in 2013. These transactions raised a total of \$11.0B globally, which was 46% more than 2013 and over 5x the amount raised in 2012—see Charts 2 and 3.

Private Financing and Partnering Also Remain Strong

Global venture funding totaled \$16.5B in 2014 compared to \$12.7B in 2013 – see Chart 3. Partnering activity also remained a bright spot with deals up 23% YoY to \$53.1B last year – see Chart 5.

What Does Pharma/Biotech Funding Data Tell Us?

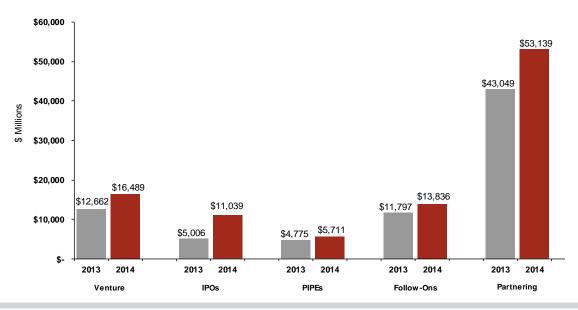

Tracking this data provides us with three different leading indicators of future demand for CRO services:

- (1) -- Venture funding, IPOs and follow-ons provide an indication of the amount of 'new' money in the system available to fund development projects. Usually small- to mid-sized drug companies (i.e. SMids) fund their work in this manner. Companies of this size typically lack the internal resources necessary to manage clinical trials, and therefore, tend to lean on the CROs for help.
- (2) -- Partnering is also a popular way for smaller drug companies to fund research and development work. In these arrangements the company developing the compound grants a portion of future drug sales and/or equity ownership in exchange for an upfront cash payment and the promise of milestone-based payments. It is best to think of these arrangements as an indirect R&D expenditure for larger pharma companies.
- (3) -- Since R&D generally serves as a reliable (and potentially large) source of M&A synergies, M&A activity serves as an indicator of future drug pipeline rationalizations or R&D reorganizations. In the near-term, these rationalizations tend to be a negative for CROs because they can result in in-process project terminations, holds, or stalling of new awards; however, over the long-term, the combined entity usually outsources a greater percentage and dollar value of work (which is a positive for CROs).

Foreign Exchange Update: U.S. Dollar Continues to Strengthen Against Primary Foreign Currencies

Issues surrounding the FOREX impacts remain front and center for CROs. The progression of the European QE program and an eventual US rate liftoff likely keep the USD strong for the foreseeable future. This will keep FOREX topical for CROs until at least 4Q15 when we begin lapping last year's inflection in USD.

Since CROs reported 4Q14 earnings (mid- to late-February), the USD has strengthened further against both EUR and GBP. The lone exception is CNY, which sharply reversed course and began strengthening vs. USD in mid-March. The weaker European currencies mean revenue headwinds across much of the group have stiffened, creating a risk for downward revenue guidance adjustments. On the flip side though, those that have a mismatch between revenue and costs (primarily the late-stage CROs), should experience even stronger EBIT tailwinds.

FOREX Movements and CRO Impact: A Quick Recap

The strengthening of the USD that began last May accelerated in late-'14/early-'15 and only recently began showing signs of stabilizing. Consequently, the YoY differences in the primary European currencies (EUR and GBP) and the JPY will act as a significant headwind to CRO revenue growth for the next several quarters (through 3Q15, at least).

Chart 7: Change in Foreign Exchange Rates

A positive change means the U.S. Dollar strengthened vs. that particular currency – e.g. the 21.6% YoY move in EUR during 1Q15 means a EUR is worth ~22% less USD this year vs. last.

Currency	1Q15 Seq. Change	1Q15 YoY Change	2Q15E YoY Change
CHF	(1.2%)	6.7%	9.5%
CNY	0.0%	0.3%	(0.7%)
EUR	10.8%	21.6%	26.9%
GBP	4.4%	9.2%	12.7%
JPY	4.1%	15.9%	17.5%

Source: ONADA - http://www.oanda.com/ Exchange rates as of April 20, 2015

The resulting impact on EBIT is not as obvious though. For CROs, a large and/or growing percentage of revenue from foreign activities is denominated in USD. Over the last 5+ years, global programs and strategic relationships have moved toward contracting in USD, even when work is being executed and operating costs incurred in foreign currencies. As a result, many CROs have some mismatch when translating revenue and costs back to USD for reporting purposes. In a strong dollar environment, as we have seen recently, revenue and expenses are reduced on translation. FX movements compress the related operating expenses to a greater degree than revenue, such that EBIT could see an absolute benefit when revenue experiences an FX headwind and vice versa.

Because of the many currencies involved, particularly on the cost side, (and incomplete disclosure) calculating the net impact to EBIT is proving more difficult. Thus, we are hesitant to make aggressive trading calls on this factor because:

Rating | Target | Estimate Change

April 24, 2015

- Foreign exchange related gains/losses should receive less credit or deduction anyway, relative to changes in demand or underlying profitability
- We can be fairly confident about the revenue impact, but less confident about the EBIT impact.

FOREX Exposures and Disclosures Vary By Company

A key point to remember when analyzing FX exposure by CRO is that 'revenue mix by geography' and 'revenue mix by currency' is not synonymous. Despite the large CROs becoming increasingly global, a greater proportion of their revenue tends to be denominated in USD. This is primarily attributable to the large, strategic deals they have signed with pharma during the past several years. A common contracting convention is that despite where the work is being performed, and even where the sponsor is domiciled, CROs are paid in USD. To illustrate, despite 36.6% of PRXL's FY14 revenue being derived from Europe, Middle East and Asia, its largest foreign currency exposures were EUR (13.7% of revenue) and GBP (2.9% of revenue). Thus, using 'revenue by geography' which is commonly disclosed in SEC filings, almost always overstates a CROs' revenue exposure to that particular currency. We outline the difference by company in *Chart 8*.

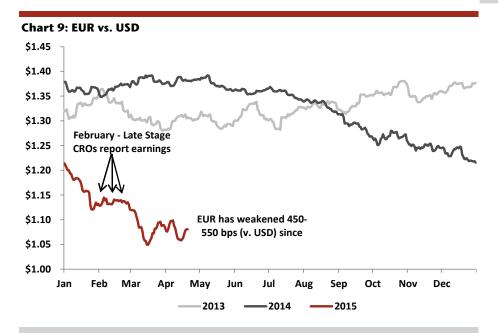

Chart 8: FOREX Exposure By Company

	Re	venue Mix l	Ву		
Ticker	Geographic R	egion	Curi	rency	Comments / Guidance
CRL	United States Canada Europe Japan Other	45.4% 12.6% 34.4% 3.8% 3.8%	USD CAD EUR GBP JPY CNY Other	53% 5% 19% 15% 4% 3% 1%	- Guidance assumes FOREX is a 500 bps headwind to revenue and a \$0.12 headwind to EPS - Headwind will be most acute in RMS and Manufacturing; less so in DSA - More than half of DSA revenue is denominated in USD, but "most" of its costs are in CAD; expecting EBIT margin benefit in that segment as a result
ICLR	United States Europe Rest of World	40.3% 48.8% 10.9%	USD	???	- Have assumed a 200 bps revenue headwind in guidance - Not expected to have much impact on EBIT/EPS
PRAH	United States Canada/Mexico United Kingdom Netherlands Other	64.9% 2.3% 24.8% 5.3% 2.7%	USD EUR GBP Other	83% 12% 2% 3%	- Guidance assumes "very little" FOREX benefit to margin - Costs by currency: 56% USD; 18% EUR; 7% GBP; and 19% Other
PRXL	United States Canada/Mexico EMEA Asia/Pacific	47.0% 3.1% 36.6% 13.3%	EUR GBP	13.7% 2.9%	- Guidance assumes FOREX is a 190 bps headwind - Impact on EBIT/EPS is minimal owing to "natural hedges"
Q	United States Canada/Mexico United Kingdom Europe, ex U.K. Japan Asia, ex Japan Reimbursed Svcs	29.1% 3.6% 7.4% 20.5% 8.6% 7.1% 23.7%	USD EUR GBP JPY Other	63% 16% 8% 10% 3%	Guidance assumes FOREX is a 420 bps headwind to revenue Expects FOREX benefit to EBIT margin to be smaller than was experienced in '14 (i.e. less than \$22.6M) Guidance is based on rates as of Jan 1, 2015
wx	United States Europe Asia Other	61.9% 14.1% 20.9% 3.0%	USD	90%	- More than 2/3rds of total expenses are denominated in CNY - Guidance assumes 6.25 CNY for entire year

Upgrading Quintiles (Q) to BUY: Leading Player, Stable Performer

Upgrading Quintiles for Both Longer-term and Short-term Tactical Reasons

Quintiles long-term prospects are enhanced by three dynamics:

- Industry R&D spending growth is rising toward mid-single digits, whereas we had expected a moderation back toward 2-2.5% in 2015 and 2016
- Quintiles broad client base (11 customers > \$100M in bookings, and typically more mid/large pharma) means less exposure to biotech M&A volatility
- The quickening pace of new product approvals and the higher percentage of those with large post-approval study commitments increases growth opportunities for Quintiles' IHS business.

In the short-term, we are availing ourselves of a tactical window created by:

- Share price underperformance relative to the CRO peer group. 23% for peers vs. 14.5% for Q.
- Persistent, and actually increasing, strength in the US dollar in 2015 vs. 2014.
 We think the margin benefit should be much larger than 2014, though management guidance suggests a smaller benefit.
- Six analysts have cut 1Q15 numbers, taking a penny out of consensus and contributing to the underperformance in the stock. Primarily because of the likely FX benefit, we think that caution is overdone.

What makes the Stock Rise?

If we are correct, \$0.72 should be fine for 1Q, which will be reported on Wednesday, April 29. Consensus has now dropped to \$0.71. Moreover, guidance for 2015 should move higher. As 2H14 bookings begin to convert to revenue, growth should reaccelerate into 2H15 and 2016. Finally, Q's strong operating cash flow is building idle cash on its balance sheet. Acquisitions (probably smaller ones, but hard to rule out something larger) are management's first choice. We could also envision expanded repurchase activity to further reduce the private equity overhang and share count.

Right Out of the IPO Playbook

Quintiles' management has executed very well since its May 2013 IPO. Revenue growth has accelerated in 2014 to 9.4% (6.8% CDO, which is right in the expected range) from 3.1% in 2013. Despite the large numbers Q's sales team must post each quarter, net bookings actually grew faster than revenue at ~14% to \$5.6B with a particularly strong 1.41 book to bill in the Product Development segment.

While not completely apples-to-apples, that PDEV book-to-bill tops the peers group, which is no small feat. Certainly, the other public peers (CVD, ICLR, PRXL) were mustering their standard competition, but two new IPOs probably were also trying to pretty up their backlogs for a positive reception by investors. Across the enterprise, Quintiles has 11-12 clients generating north of \$100M in revenue, where the next closest peer has less than 5 (probably 3 or less). Bookings backed that up with 11 clients that awarded more than \$100M in net new business last year.

Margin also has steadily improved to drive upside surprises in each of its 7 public quarters. A portion of that (about half in 2014) has come from productivity advancements and operating leverage, slightly outpacing management's guidance. FX movements, primarily a strong USD, contributed additional meaningful margin benefit (60 bps for all 2014, and 90 bps for 4Q). That brings us to why now.

Rating | Target | Estimate Change

April 24, 2015

Why Not Before?

We had shied away from recommending the stock post-IPO on margin concerns. Channel checks had suggested more aggressive pricing driving Q's steep book-to-bills pre-IPO. It would not have been the first time a company bought a little makeup before a sale. As the quarters have progressed, margins instead have outperformed. Yet, valuation quickly expanded and had seemed to us a little ahead of the growth curve. The market seemed to give the stock credit for margin expansion greater than management was guiding and driven, in part, by FX.

Not inconsequential was our concern that the margin advancement could reverse for one, or both, of two reasons:

- Management continued to insist that margin expansion would be modest (more in IHS, less in PDEV), even on the heels of PDEV outperformance.
- The currency benefits historically have been hard to predict and often shortlived.

Clearly, those concerns have proven overblown.

Our awareness of the private equity overhang was also part of the mix. Q's PE investors had owned since early-2008 or longer and likely weren't hanging around for long. To be honest, we still are mystified by the stock beginning to perform after those insiders began to sell those shares (with 5x as much still to sell). In the broader sense, management and the Board have supervised the overhang well, pulling out a "trick play" and buying back insider shares in one case. The blend of more liquidity but also redeployment of free cash flow was welcomed by the market.

Why Upgrade Now?

We would offer five reasons:

- Q is coming off a year of solid top-line growth, but even stronger bookings growth. Yes, management has cautioned that the year will get off to a somewhat slow start (we'll revisit this in a minute) because of the gating of cancellations and new business in PDEV, but growth should be well-supported by backlog.
- FX is not going to meaningfully reverse. We are in a strong dollar environment. With the US Federal Reserve considering rate lift-off, a relatively stronger US economy, and (perhaps most importantly) the ECB initiating quantitative easing, the dollar strength against the EURO (and Yen) is likely to continue for some time. Management has downplayed the FX benefit to margin in public commentary year-to-date, but it has filled enough sandbags since the IPO to protect the Outer Banks from a hurricane storm surge.
- Fundamental margin expansion can continue, principally in the Integrated Health Services business. That segment's growth is driving operating leverage on overhead costs. Management is driving productivity improvements. The shift in mix toward "real-world, late-phase" research and mega-registry studies is also favorable to margin.
- Six analysts have cut numbers in the last three weeks, reducing mean expectations by about a penny and, more importantly, depressing sentiment ahead of 1Q15 earnings results on April 29.

Rating | Target | Estimate Change

April 24, 2015

• Finally, Q has underperformed each member of the comp group and underperformed the average by 780 bps YTD. We think 1Q will actually be better than the now diminished expectations.

Revised EPS Estimates

We have revisited our model, taking margin expansion opportunities (primarily in IHS) into greater account. Based on analysis of last year's performance and our FX analysis early in this report, we have revised our forecasts to accommodate a small part of the FX impact...but only a small part.

In short, we have reduced 2015 revenue by another \$20M and raised Adjusted EBITDA margin by 10 bps. We had previously included 20-30 bps of FX-related margin help. Now that total is 30-40, compared to 60 bps gained in 2014.

Management has guided to a smaller FX benefit in 2015 than in 2014, so we are still in that territory. However, much of Q's margin benefit comes from the mismatch on Japanese Yen and Indian Rupee. Those spreads are not smaller in 2015 than they were in 2014. Moreover, the YoY change in the European currencies has increased significantly. Management indicates that it hedges the mismatch away in those countries, so perhaps that is a neutral, but it seems very unlikely to be a negative.

Bottom line: We take a penny out of 1Q15, while our full year 2015 is unchanged. We raise 2016 EPS estimates to \$3.58 from \$3.43. Our new estimate is slightly above consensus (+2.3%).

Valuation

Q trades at 21.5x 2015 EPS and 19.4x 2016. This is slightly below the group average for both years. Holding its current year multiple, Q could trade to \$77 on a P/E basis. On this point, we actually believe the EPS lift from higher margin could be substantially more than we are showing in the model and more than management is letting on.

In our DCF model, we arrive at \$80 using a 1.15 Beta (Bloomberg says 0.79, for what it's worth), a 7.6% WACC, and a 13x EBIT terminal multiple, which is lower than current trading levels and typical CRO transaction multiples in the mid-teens.

Taking the average of these two brings us to a price target of \$79.

Pfizer Confirms Third Alliance Partner

In a story carried by Outsourcing-pharma.com on Wednesday, Pfizer confirmed the long-awaited third Alliance Partner as Pharmaceutical Product Development (PPD). We wrote about this on January 6 (CRO "Strategic Deals" Progressing w/Important Changes). We were able to alert the market to an inevitable 3rd partner in the deal, but were not able to name the private player. (http://bit.ly/1lie5vU). Pfizer has now confirmed that winner.

We think additional context will help investors to set expectations around ICLR and PRXL, Pfizer's two pre-existing Alliance Partners.

Pfizer Already Outsources Essentially All Clinical.

From our tracking of the Alliance Partnership (AP) from its origins, we know that PFE already outsourced ~80% of clinical development work to a long list of vendors before the AP began. In fact, a key goal of the AP was to consolidate outsourced services from 17 functional service providers (FSPs) to 2 Alliance Partners. A second goal was to increase outsourcing to 90% of clinical activities from 80%, with the remaining 10% intended to stay in-house.

Rating | Target | Estimate Change

April 24, 2015

Takeaway 1: The third vendor is a reflection of Pfizer needing to consolidate more activity still being executed by a smattering of FSP vendors into the Alliance Partnership and needing another AP vendor to provide the flexibility to do that.

Takeaway 2: It is not a signal that Pfizer can outsource a larger percentage of its budget, as it is basically maxed out on that.

ICLR Awarded Bigger, Newer Studies

Pfizer tagged about 200 studies that moved from those FSPs to ICLR and PRXL. Yes, PRXL got more mid-stream projects, of which some large ones have concluded, confirming PRXL's comments in October 2014 about early completion of studies. ICLR had a heavier mix of new study starts, which ramped in 2013 and 2014 driving ICLR's top client revenue from \$200M in 2012 to \$466M in 2014. PRXL's top client (again, presumably Pfizer) generated \$311M in CY14 revenue, about flat with \$315M in CY13.

Takeaway 3: We have thought for a couple of quarters that ICLR's *bookings* from Pfizer were going to plateau and even decline in 2015. We expect this to result from risk management controls, not performance.

Takeaway 4: Thus, our attention has been on ICLR's overall book-to-bill and comments about wins from non-Pfizer clients, as ICLR's growth leadership is rotating away from Pfizer. This week's confirmation of a third Alliance Partner is a lagging indicator to that.

Price Target Changes

Increasing CRL to \$90.00 from \$85.00. The sell-side has remained predominantly cautious on early development as volumes have improved over the last 18 months. Some have even come in late and left early. Our higher R&D spending outlook coupled with biotech funding strength should be particularly positive for early development and CRL.

In the short run, we acknowledge that FX is both a top and bottom line headwind for CRL, which could hurt short-term guidance.

In the long run, we highlight two points that address elements of the cautious theses.

- Cycles for CRO segments tend to run for 5-6 years. Nothing particularly magic about that...the cycle termini have come for different reasons, but durations are surprisingly similar. 1994-1999 late-stage; 2001 2006 early-stage; 2003 2008 late-stage; 2010 ? late-stage; 2013 ? early-stage.
- CRL's animals models business does face secular headwinds as scientists find ways to reduce animal volumes in studies. This is not new in 2014 or 2015, but a multi-year response to animal husbandry principles. Within that secular trend, CRL is seeing cyclical upticks, starting in North America. Europe and Asia improvements are said to typically lag North America. For what it's worth, CRL's competitors have echoed the same sentiments.

The increase is driven by a higher '16 P/E multiple (20x vs. 18x). We believe CRL should trade at a slight premium to its pharma services peers because of the cyclical turn in its subsector.

Increasing PRXL to \$62.00 from \$57.00. PRXL is a mixed bag to us, leaving us with low directional conviction. We believe the FY4Q revenue expectations (\$549M consensus, \$544 Jef) look quite aggressive even in a stable currency environment, which we do not have. The company might get a pass if a guidance cut was only for FX, but management

Rating | Target | Estimate Change

April 24, 2015

might need a sharper knife than that depending on the ramp of this backlog bolus in start-up (discussed last call).

On the other hand, RFP activity in the March quarter was purportedly strong. If PRXL posted a strong book-to-bill for a second quarter in a row, cut revenue guidance, but increased EBIT/EPS guidance on FX, the stock might do okay. Further, a little growth in PRXL's largest client would be a confidence boost for bulls, as well. We remain at Hold and still believe PRXL should trade at a discount. Our \$62 price target applies an 18x P/E to our calendar 2016 estimate.

Quintiles (Q): Undisputed Market Leader

Buy: \$79.00 Price Target

Scenarios

Target Investment Thesis

- PDEV revenue growth approximates 7%
- IHS revenue grows 7%
- EBIT margins continue to improve
- Net interest expense declining with debt repayment
- Cash builds on balance sheet; both share buybacks and debt repayment are modest
- 2016 EPS: \$3.58; Target Multiple: 22.1x; Target Price \$79.00

Upside Scenario

- Additional 'preferred vendor' deals are signed; PDEV revenue growth nears 10%
- IHS revenue growth also accelerates driven by additional Commercial engagements
- EBITDA margin improves to >19% on fixed
 Soft pricing drives margin deterioration; leverage and cost control
- Free cash flow is used for tuck-in acquisitions
- 2016 EPS: \$3.70; Target Multiple: 23x; Target Price \$85.00

Downside Scenario

- Pricing pressures intensify; consolidated revenue growth slows to sub-6%
- Few new deals are signed; growth in latestage clinical slows without offset in IHS
- costs tightly controlled to mitigate impact
- Free cash is used to repurchase shares
- 2016 EPS: \$3.20; Target Multiple: 18x Target Price: \$57.50

Long Term Analysis

1 Year Forward P/E 30.0x 25.0x 20.0x 15.0x 10.0x Jan-13 Forward P/F - Upside Downside

Source: FactSet and Jefferies LLC

Long Term Financial Model Drivers

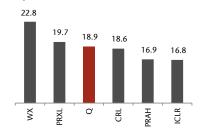

12-13%
7-9%
14-16%
30%

Other Considerations

Q certainly deserves some valuation premium based on its industry leadership status and broader investability. The company has also done a great job staying ahead of peers and finding ways to enhance its industry-leading margins. FX should help out on this front again in 2015. Management continues to pursue additional tuck-in acquisitions to augment growth.

Recommendation / Price Target

Ticker	Rec.	PT
CRL	BUY	\$90.00
ICLR	BUY	\$80.00
PRXL	HOLD	\$62.00
PRAH	BUY	\$31.00
Q	BUY	\$79.00
WX	HOLD	\$38.00

Catalysts

- Signing of additional 'strategic' agreements
- Growth in pharma R&D budgets and/or the amount of work being outsourced
- Increased clinical trial starts, especially large global studies
- More rapid re-deployment of cash flow

Company Description

Quintiles is the leading provider of biopharmaceutical development and commercial outsourcing services in the world, covering the Americas, Europe and Africa, and the Asia-Pacific. The company operates in two segments – Product Development and Integrated Healthcare Services – and primarily serves biopharmaceutical companies, as well as other healthcare companies. These services lines are supported by significant investments in technology, big data analytics, and tech-enabled services. Q is also building a meaningful strategic and management consulting unit to provide thought leadership to clients in R&D strategies. It was founded in 1982 and is based in Durham, North Carolina.

CRL: Preclinical Demand Improving

Buy: \$90.00 Price Target

Scenarios

Target Investment Thesis

- Steady increase in preclinical demand from
 both large and small clients
- Industry capacity utilization nears ceiling, allowing price, margin improvement
- Solid cost controls and balance sheet deployment drive EPS growth
- Expanded service offering and client base via BioFocus/Argenta/ChanTest
- 2016 EPS: \$4.19; Target Multiple: 21.5; Target Price \$90.00

Upside Scenario

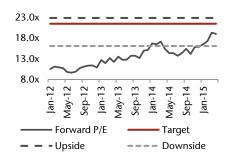

- Strong, broad-based preclinical demand fills capacity and drives mid-single digit price increase
- Competitor disruption allows share capture for CRL
- Utilization + pricing yields Incremental margin in PCS of 35-40% for 1-2 years
- Continued uptake of Endosafe-PTS drives 10%+ Manufacturing Support growth
- 2016 EPS: \$4.50; Target Multiple: 23.0x; Target Price: \$103.00

Downside Scenario

- Preclinical demand fails to accelerate; pricing remains stagnant
- Duration and mix of tox studies remains "short-biased", holding margin in PCS
- Pricing in new partnerships too aggressive
- Research model volumes do not benefit from increase in biotech activity
- Lower cash flow performance reduces benefit of capital deployment.
- 2016 EPS: \$3.85; Target Multiple: 16x
 Target Price: \$62.00

Long Term Analysis

1 Year Forward P/E

Source: FactSet, Jefferies estimates

Long Term Financial Model Drivers

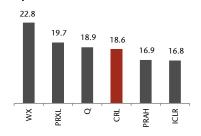

LT Earnings CAGR	10-12%
Revenue Growth	5-6%
Operating Margin	18-20%
Effective Tax Rate	28-29%

Other Considerations

The breadth of CRL's expertise in prehuman research products and services (GLP and non-GLP testing) is becoming increasingly important to big pharma. The trend toward narrower vendor lists to save R&D dollars and make quicker go/no-go decisions should avail share gain opportunities. Outsourcing of discovery and preclinical work (CRL's core skills) has lagged that of clinical, implying these areas have a longer runway.

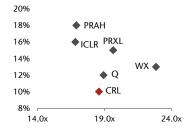

Peer Group

Group 2016 P/E

Earnings Growth vs. P/E

Source: FactSet, Jefferies estimates

Recommendation / Price Target

Ticker	Rec.	PT
CRL	BUY	\$90.00
ICLR	BUY	\$80.00
PRXL	HOLD	\$62.00
PRAH	BUY	\$31.00
Q	BUY	\$79.00
WX	HOLD	\$38.00
PRAH	BUY	\$31.00

Catalysts

- Acceleration in tox demand
- Share gain opportunities via platform sales to clients desiring one-stop-shop
- Increase in early stage spending by small/mid biopharmas
- Reductions in early stage industry capacity coincident with higher volume could lead to stronger pricing in 2015 and 2016

Company Description

Charles River Laboratories is a leading provider of animal research models and contract drug development services to the global biopharmaceutical industry. The company holds 50%+ market share in the supply of animals used in scientific research. Through acquisitions and de novo development, Charles River Labs has surrounded that franchise with services in late-discovery and early development of new drugs. In the most significant of these services, mammalian toxicology, Charles River became the second largest global player through its acquisition of Inveresk Research in 2004. CRL established a leadership position in outsourcing discovery work through acquisitions of Argenta, BioFocus, and ChanTest in 2014.

Rating | Target | Estimate Change

April 24, 2015

PRXL: Margin Expansion is Key to Sustaining EPS Growth

HOLD: \$62.00 Price Target

Scenarios

Target Investment Thesis

- Mid- to high-single digit backlog growth, stable conversion yields 6-8% revenue growth
- CRS GMS continues to improve to 32%
- PI revenue begins to accelerate toward high-single digits
- Efficiency and productivity initiatives lift OM to mid-12% range
- Tax rate trends down to ~26%
- CY16 EPS: \$3.42; Target Multiple: 18.0x; Target Price \$62.00

Upside Scenario

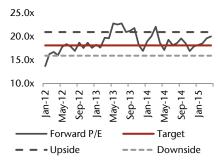

- RFPs inflect higher, driven by small biotechs; rebound in PFE business
- Cancellations drop back to normal range.
- Book-to-bill exceeds 1.2x target, driving revenue growth to low-teens
- Margins expansion continues above 13%
- Early Phase unit benefits from shift in budgets; Phase I operating leverage, ERP rollout, and revenue growth add to OM
- CY16 EPS: \$3.60; Target Multiple: 21x; Target Price: \$75.50

Downside Scenario

- Cancellation rates remain elevated and/or delays force projects out of backlog
- Book-to-bill trends toward 1.0x and revenue growth slows to low-single digit
- OM fails to sustain 12%+ level, due to continued discounting, "cost creep," and/or negative mix shift
- In ability to sustain share with strategic clients
- CY16 EPS: \$3.20; Target Multiple: 16x
 Target Price: \$51.00

Long Term Analysis

1 Year Forward P/E

Source: FactSet, Jefferies estimates

Long Term Financial Model Drivers

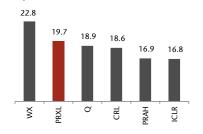

LT Earnings CAGR	15%
Revenue Growth	7-8%
Operating Margin	12-14%
Backlog	\$5.5B

Other Considerations

The new strategic partnership paradigm produced significant revenue growth and margins improvement. Those gains have stalled relative to PRXL's peers and need to reaccelerate to drive share appreciation. We believe PRXL's top 5 clients, which represent 46% of revenue, are in mature strategic deals with relatively stable revenue. Thus, PAREXEL will need smaller clients to produce substantial bookings and revenue growth to hit targets.

Recommendation / Price Target

Ticker	Rec.	PT
CRL	BUY	\$90.00
ICLR	BUY	\$80.00
PRXL	HOLD	\$62.00
PRAH	BUY	\$31.00
Q	BUY	\$79.00
WX	HOLD	\$38.00

Catalysts

- Acceleration in backlog conversion
- Announcement of new strategic partnerships
- Success in capturing substantial bookings from recently funded biotechs
- Enterprise software deals in PI

Company Description

PAREXEL is a global provider of outsourced drug development, marketing, consulting, and IT solutions to the pharmaceutical and biotechnology industries. Based in Waltham, MA, the company employs over 15,500 people worldwide. PRXL operates three segments: Clinical Research Services, Marketing and Consulting Services, and PAREXEL Informatics. Among the publicly traded CROs, PAREXEL has the highest percentage of revenue derived outside the United States (65%+). PAREXEL's investment in information technology, including its proprietary IMPACT clinical trial management system and ClinPhone IVR, also makes it unique.

Rating | Target | Estimate Change

April 24, 2015

Company Description

Catalent, Inc. is the leading global provider of advanced delivery technologies and development solutions for drugs, biologics and consumer health products. With over 80 years serving the industry, Catalent has proven expertise in bringing more customer products to market faster, enhancing product performance and ensuring reliable clinical and commercial product supply. Catalent employs approximately 8,000 people, including over 1,000 scientists, at nearly 30 facilities across 5 continents.

Charles River Laboratories is a leading provider of animal research models and contract drug development services to the global biopharmaceutical industry. The company holds 50% market share in the supply of animals used in scientific research. Through acquisitions and de novo development, Charles River Labs has surrounded that franchise with services involved in the development of new drugs. In the most significant of these services, mammalian toxicology, Charles River became the second largest global player through its acquisition of Inveresk Research in 2H04. The acquisition also marked the company's entry into clinical services, albeit in a small way.

ICON is a global Phase I-IV contract research organization. After a period of extremely strong growth in Europe/ROW territories, ICON's clinical revenue is approximately balanced between U.S. and ex-U.S. operations. After establishing an international presence in Phase II-IV clinical development, ICON has made a number of acquisitions to expand services, client lists, and geographic reach. The company's Central Lab represents under 10% of revenue. ICON's management team continues to benefit from the active involvement of its two founders.

PAREXEL is a global provider of outsourced drug development, marketing, consulting, and IT solutions to the pharmaceutical and biotechnology industries. Based in Waltham, MA, the company employs over 10,300 people worldwide. PRXL operates three segments: Clinical Research Services, Marketing and Consulting Services, and Perceptive Informatics. Among the publicly traded CROs, PAREXEL has the highest percentage of revenue derived outside the United States (60%+). PAREXEL''s investment in informational technology, including its proprietary IMPACT clinical trial management system, also makes it somewhat unique.

PRA Health Sciences is a leading global contract research organization. The company provides outsourced clinical development services to the biotechnology and pharmaceutical industries. PRA's global clinical development platform spans 80 countries and employs more than 10,000 individuals worldwide. Since 2000, the company has performed approximately 2,300 clinical trials worldwide and has worked on more than 100 marketed drugs across several therapeutic areas.

Quintiles Transnational provides biopharmaceutical development and commercial outsourcing services in the Americas, Europe and Africa, and the Asia-Pacific. The company operates in two segments—Product Development and Integrated Healthcare Services—and primarily serves biopharmaceutical companies, as well as other healthcare companies. It was founded in 1982 and is based in Durham, North Carolina.

West Pharmaceutical Services, Inc. manufactures components and systems for injectable drug delivery and plastic packaging, and delivery system components for the healthcare and consumer products markets. It operates in two segments, Packaging Systems and Delivery Systems. The Packaging Systems division engages in the design, manufacture, and sale of various packaging components such as stoppers and plungers used in parenteral drug delivery for the pharmaceutical, biopharmaceutical, and generic industries. This division also provides laboratory services such as extractables and leachables testing, package/container testing, method development/validation, stability testing and process development. The Delivery Systems division is involved in the manufacture and assembly of devices used for injectable drug delivery. This division also produces injection molded components and devices, such as contact lens storage kits, pill dispensers, and disposable blood collection systems, as well as various personal care and consumer products. The company has a global footprint and markets its products and services principally through its own sales force and distribution network. The company was founded in 1923 and is headquartered in Lionville, Pennsylvania.

WuXi is a leading China-based pharmaceutical and biotechnology R&D outsourcing company. WuXi offers a broad and integrated portfolio of laboratory and manufacturing services in the drug discovery and development process to pharmaceutical and biotechnology companies. The company's operations are grouped into two segments: laboratory services, consisting of discovery chemistry, service biology, analytical, pharmaceutical development and process development services, and manufacturing, focusing on manufacturing of advanced intermediates and API''s.

Meanings of Jefferies Ratings

Buy - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period. Underperform - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated stocks with an average stock price consistently below \$10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated stocks with an average stock price consistently below \$10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated stocks with an average stock price consistently below \$10, the expected total return (price appreciation plus yield) is minus 20% within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risk which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

The information set forth herein was obtained from sources believed to be reliable, but has not been independently verified by Jefferies. Therefore, except for any obligation under applicable rules we do not quarantee its accuracy. Additional and supporting information is available upon request. Unless prohibited by the provisions of Regulation S of the U.S. Securities Act of 1933, this material is distributed in the United States ("US"), by Jefferies LLC, a US-registered broker-dealer, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6, under the US Securities Exchange Act of 1934. Transactions by or on behalf of any US person may only be effected through lefferies LLC. In the United Kingdom and European Economic Area this report is issued and/or approved for distribution by Jefferies International Limited and is intended for use only by persons who have, or have been assessed as having, suitable professional experience and expertise, or by persons to whom it can be otherwise lawfully distributed. Jefferies International Limited has adopted a conflicts management policy in connection with the preparation and publication of research, the details of which are available upon request in writing to the Compliance Officer. Jefferies International Limited may allow its analysts to undertake private consultancy work. Jefferies International Limited's conflicts management policy sets out the arrangements Jefferies International Limited employs to manage any potential conflicts of interest that may arise as a result of such consultancy work. For Canadian investors, this material is intended for use only by professional or institutional investors. None of the investments or investment services mentioned or described herein is available to other persons or to anyone in Canada who is not a "Designated Institution" as defined by the Securities Act (Ontario). In Singapore, Jefferies Singapore Limited is regulated by the Monetary Authority of Singapore. For investors in the Republic of Singapore, this material is provided by Jefferies Singapore Limited pursuant to Regulation 32C of the Financial Advisers Regulations. The material contained in this document is intended solely for accredited, expert or institutional investors, as defined under the Securities and Futures Act (Cap. 289 of Singapore). If there are any matters arising from, or in connection with this material, please contact Jefferies Singapore Limited, located at 80 Raffles Place #15-20, UOB Plaza 2, Singapore 048624, telephone: +65 6551 3950. In Japan this material is issued and distributed by Jefferies (Japan) Limited to institutional investors only. In Hong Kong, this report is issued and approved by Jefferies Hong Kong Limited and is intended for use only by professional investors as defined in the Hong Kong Securities and Futures Ordinance and its subsidiary legislation. In the Republic of China (Taiwan), this report should not be distributed. The research in relation to this report is conducted outside the PRC. This report does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. In India this report is made available by Jefferies India Private Limited. In Australia this information is issued solely by Jefferies International Limited and is directed solely at wholesale clients within the meaning of the Corporations Act 2001 of Australia (the "Act") in connection with their consideration of any investment or investment service that is the subject of this document. Any offer or issue that is the subject of this document does not require, and this document is not, a disclosure document or product disclosure statement within the meaning of the Act. Jefferies International Limited is authorised and regulated by the Financial Conduct Authority under the laws of the United Kingdom, which differ from Australian laws. Jefferies International Limited has obtained relief under Australian Securities and Investments Commission Class Order 03/1099, which conditionally exempts it from holding an Australian financial services licence under the Act in respect of the provision of certain financial services to wholesale clients. Recipients of this document in any other jurisdictions should inform themselves about and observe any applicable legal requirements in relation to the receipt of this document.

This report is not an offer or solicitation of an offer to buy or sell any security or derivative instrument, or to make any investment. Any opinion or estimate constitutes the preparer's best judgment as of the date of preparation, and is subject to change without notice. Jefferies assumes no obligation to maintain or update this report based on subsequent information and events. Jefferies, its associates or affiliates, and its respective officers, directors, and employees may have long or short positions in, or may buy or sell any of the securities, derivative instruments or other investments mentioned or described herein, either as agent or as principal for their own account. Upon request Jefferies may provide specialized research products or services to certain customers focusing on the prospects for individual covered stocks as compared to other covered stocks over varying time horizons or under differing market conditions. While the views expressed in these situations may not always be directionally consistent with the long-term views expressed in the analyst's published research, the analyst has a reasonable basis and any inconsistencies can be reasonably explained. This material does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this report is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of the investments referred to herein and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange
